

NOVA NFT250 SERIES VARIABLE ORIFICE STEAM TRAPS

Pressures To 250 PSIG (17.2 barg)
Temperatures to 450°F (232°C)

Applications

- Steam Lines
- Process Equipment
- Steam Cookers
- Steam Heated Vats
- Pressing Machinery
- Unit Heaters
- Oil Preheaters
- Converters
- Coils
- Rotating Drum

Options *See page 8*

- SLR - SLR Orifice
- B - Blowdown Valve
- Orifice Continuous Bleed Air Vent
- 250# - 250# Flanged Connection*

*Available on NFT 253 only.

All Stainless Steel Internal Components — Hardened valves and seats. Extra long life and dependable service. Resists water hammer. Protects against erosion and corrosion.

Erosion Proof — Discharge passage is protected with a stainless steel liner.

Integral Strainer — Stainless Steel screen prevents dirt problems. Blow-down connection provided.

Thermostatic Air Vent — Provided with bi-metal or full balanced pressure element for immediate and complete air venting.

Variable Orifice — Condensate is discharged continuously through the seat ring which is modulated by the float. This provides a smooth, even flow without high velocity or steam entrainment.

Guarantee — Traps are guaranteed against defects in materials or workmanship for 3 years.

Models

- NFT250—Low capacity
- NFT251—Medium capacity
- NFT252—High capacity
- NFT253—Super high capacity

Canadian Registration # 0E0591.9

Operation

On startup, the thermostatic air vent (caged stainless welded bellows) is open, allowing air to flow freely through the vent valve orifice. When condensate flows into the trap, the float rises, allowing condensate to be discharged. Once air and non-condensibles have been evacuated, hot condensate will cause the thermostatic vent to close. Condensate will continue to be discharged as long as condensation occurs.

During normal operation, an increase in the load causes the liquid level in the trap to rise. The float then rises and rolls off the seat ring, allowing more condensate to flow out. The float sinks as the condensate load decreases, moving nearer to the seat ring, decreasing the effective size of the orifice and allowing less condensate to discharge. This provides smooth, continuous operation that reacts instantly to load variation while maintaining a water seal over the seat ring to prevent live steam loss.

Nova NFT250 SERIES VARIABLE ORIFICE STEAM TRAPS

Typical Specifications

Steam trap shall be of float and thermostatic design. Float shall be free of levers, linkages, or other mechanical connections. Float shall be weighted to maintain orientation and shall act as the valve being free to modulate condensate through the seat ring. Air vent shall be of balanced pressure design with stainless steel welded encapsulated bellows capable of discharging air and noncondensable gases continuously within 15°F of saturated temperature. Trap shall contain integral strainer and stainless steel exhaust port sleeve. Trap shall be cast iron bodied suitable for pressures to 250 psi and available in 1/2" through 2" NPT or flanged.

Connections:
1/2"-2" NPT or 1 1/2"-2" Flanged

Materials of Construction

Body and Cover: Cast Iron ASTM A126B

All Internal Parts: Stainless Steel

Air Vent: Balanced Pressure, Stainless Steel

Cover Gasket: Graphite Fiber

Maximum Operating Conditions

PMO: Max. Operating Pressure

ORIFICE	PMO
20	20 psig (1.4 barg)
50	50 psig (3.5 barg)
100	100 psig (6.9 barg)
150	150 psig (10.3 barg)
250	250 psig (17.2 barg)

PMA: Max. Allowable Pressure: 250 psig (17.2 barg)

TMA: Max. Allowable Temperature: 450°F (232°C)
