

SS600 SERIES NOISE DIFFUSER

Pressures To 600 PSIG (41.3 barg)
Temperatures to 750°F (400°C)

Diffuses Blast Discharge — Diffuses the high velocity discharge from steam traps.

Reduces Noise — Dampens the level of noise associated with steam trap cycles.

Corrosion Resistant — All stainless steel construction provides excellent protection from corrosion.

Causes No Back Pressure — Porous stainless steel baffle allows condensate discharge without back pressure.

Compressed Air Capabilities — Diffuser works as a muffler for compressed air exhaust.

Repairable in-line — Snap ring design allows for easy element replacement.

Applications

- Steam Traps
- Blowdown Valves
- Air Cylinders

Operation

The SS600 Diffuser is installed on the outlet side of steam traps, valves or other equipment that discharges high velocity steam, condensate or air to the atmosphere. The baffle is constructed of a fine

stainless steel wire mesh, similar to steel wool. This porous mesh breaks down the high velocity discharge which dampens the sound significantly.
